

National Building Specification (NBS)

DELTA Drainage module

Who is responsible for sealing the hole in the trade?

The GUTMANN solution

- A component that discharges water ingress to the outside in a controlled manner via the construction connection on the window, the roller shutter guide rail and the window sill end of the window sill.
- A component that can be mounted on the window without pre-planning.
- A component that can be assembled in one piece and ready-to-use.
